DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 19 is rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 1,615,873 to Fitch.

In regard to claim 19, Fitch discloses a medication vial for use with a wearable vial holder 1,2, the vial comprising:

a bottle 3 containing a quantity of liquid medication for injection and having a cap 8 puncturable by a needle for drawing medication into a syringe (see page 1, lines 60-72, FIG. 2);

an attachment member 5 affixed to an outer surface of the bottle, the attachment member comprising one component of a two-component releasable fastening system, whereby the medication vial is releasably attachable to a wearable vial holder 1,2 having the other component 4 of the releasable fastening system on a surface thereof (see FIG. 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3693

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fitch as applied to claim 19 above, and further in view of US Patent No. 5,060,835 to Payne.

In regard to claim 20, Fitch discloses the limitations above, but does not disclose hook and loop fasteners as the two-component releasable fastening system. Payne discloses a carrier apparatus for connecting a beverage container 8 to a belt 2 via a two-component fastening system comprising a hook and loop fastener (see col. 3, lines 40-50; FIG. 1). It would have been obvious to one of ordinary skill in the art at the time of the invention to use the two-component hook and loop fastener system disclosed by Payne to connect the vial and vial holder disclosed by Fitch, in place of Fitch's fastening means. Such a substitution would be accomplished by affixing the hook and loop fastener disclosed by Payne to the holder 1,2 and the component 4 of Fitch. The motivation for doing so would be to provide a secure connection that can be quickly released, and adjusted to various locations on the holder 1,2.
